

ClearShield Eco-Glass™ Durability Guidelines and Recommended AfterCare for Shower Glass

Performance

Durable, 'non-stick' ClearShield Eco-Glass™ is always much easier to clean and keep clean than unprotected glass, resisting staining and maintaining clarity and visual appeal much longer.

Ordinary, unprotected shower glass can quickly and easily suffer permanent bonding of organic and inorganic air- and water-borne contaminants, especially from limescale and mineral salts, causing staining and physical damage. Keeping the glass clean becomes very difficult, if not impossible, despite regular washing. As a result, clarity and visual appeal of the glass are spoiled.

Harsh and abrasive cleaning methods and compounds create further damage and accelerate the degradation process.

Durability Guidelines

The guideline service life of ClearShield Eco-Glass™ for Showers and Bathroom enclosures is up to 10 years*.

Recommended AfterCare

On average ClearShield Eco-Glass™ requires cleaning less than half as often as unprotected glass. We therefore recommend that you base the frequency of cleaning by halving your current cleaning regime, and either increase or decrease it as required.

To optimize the performance and durability of the unique protection, rinse off soap and water deposits on a regular basis as necessary, ideally drying off with a squeegee or cloth.

We strongly recommend the use of our Glass AfterCare products for routine cleaning, a specialist and non-alkaline, non-abrasive, water-based cleaner.

NOT TO BE USED: Abrasive cleaning methods, pads and compounds or highly alkaline cleaners should not be used on ClearShield Eco-Glass™.

Glass protected for life

ClearShield Eco-Glass™ performs indefinitely if a simple re-application is carried out once its performance becomes noticeably reduced in terms of ease of cleaning and resistance to staining. The re-application can be carried out in the field either by a manufacturer's representative or using a DIY kit.

* The durability of the special protection may be affected by harshness of the environment and the type of cleaning compounds and methods used. Such matters are outside the control of the manufacturer.
